

Other advantages of 3M™ Window Films.

Reduced glare.

Few things are as frustrating as working on a computer screen or trying to watch television in a sunlit room. By significantly reducing glare, our films help you do your work or relax without the added eyestrain from excessive light.

Increased comfort and energy savings.

On a warm day, the sun shining through your windows can drastically increase the warmth of a room. Not only do you become more uncomfortable, all that heat is costing you money when your air conditioner tries to keep up. By rejecting up to 79% of the sun's heat, our film can significantly reduce your energy bill.

Protecting your family's health.

Ultraviolet rays are the primary cause of skin cancer. By blocking up to 99% of the sun's UV rays, our films help protect your family.

Backed by 3M.

We have one of the most comprehensive warranties you can get. 3M window films are backed by a limited-lifetime residential warranty should your window film need replacing.

Our authorized dealers are ready to help you.

Our 3M authorized dealers are available to help solve problems like energy control and faded furnishings.

Contact your local authorized 3M Window Films dealer for a free estimate. For more information, please call 1-800-480-1704 or visit us at www.3m.com/windowfilm

The Skin Cancer Foundation recommends many 3M Window Film products as effective UV protectants.

Fade Control

A higher standard for fade protection.

3M™ Window Films help protect your home from damaging sunlight.

Both financially and emotionally, you've made a tremendous investment in your home. Once that investment is made, the next step is keeping it looking beautiful. Unfortunately, fabrics, wallpaper, natural wood floors, photos and other valuables will fade when unfiltered sun shines through your windows.

The causes of fading:

3M Window Films address the three major causes of fading.

3M Window Films are designed to reduce the effects of solar heat and visible light on your furnishings and will block up to 99% of the sun's harmful ultraviolet rays, which are the single largest cause of fading. Depending on the film you chose, you can enjoy a 79% reduction in the sun's heat. While no film can stop fading completely, our films dramatically slow the progress of fading to keep your home looking beautiful.

See for yourself.

This graphic is specifically designed to turn purple when it detects UV rays. Place it in sunlight coming through your windows and see if your plain windows protect you from damaging UV rays.

Trust 3M.

When it comes to protecting your home, you want to deal with a company you can trust. No one has more experience with window film. In 1966, we received the first patent for window film and we continue to invent new ways to make your life brighter. Today there are millions of square feet of 3M Window Films installed all around the world.
